Time:

09:00 AM – 05:00 PM

Increase your VMware productivity with “What’s New” Workshop. This complimentary workshop and is open to both VMware partners and customers.

Come and learn from our Trainer and maximize your VMware Learning Journey today!

AGENDA

Morning

What’s new vSphere 6.5

VMware vSphere 6.5 is the next gen infrastructure for next gen apps. With vSphere 6.5 you can now run, manage, connect, and secure your applications in a common operating environment,

across clouds and devices. vSphere 6.5 introduces features that elevate your experience to an entirely new level

vSAN

vSAN is radically simple, enterprise-class software-defined storage powering VMware hyper-converged infrastructure. Learn how Virtual SAN functions as an important component in the VMware software-defined data center.

Afternoon

NSX

NSX embeds networking and security functionality that is typically handled in hardware directly into the hypervisor. The NSX network virtualization platform fundamentally transforms the data center's network operational model like server virtualization did 10 years ago, and is helping thousands of customers realize the full potential of an SDDC.
